**INNOVATION**

Arlington is celebrating 75 years in business in 2024!

Founded in 1949, Arlington first served the electrical industry as a regional supplier of zinc die cast fittings. After the Stark family acquired the company in 1956, Arlington's focus turned to expanding the product line to meet the changing needs of the industry. And to developing products that solve job site problems and situations, enhance safety and above all, save installers time.

Over the past 75 years, Arlington has become a leading manufacturer of traditional metallic and non-metallic fittings and connectors - while remaining an industry leader in the development of MADE IN USA unique and innovative electrical and communications products. In fact most of our products are made in the U.S. We have introduced hundreds of new products since Tom Stark became President of the company in 1976. And currently have more than 350 patents and patents pending in North America.

First plant location

Items like our patented **SNAP-TITE®**, **Snap2It®**, **SADDLEGRIP®**, **Black Button®** connectors, our recessed **IN BOX®** and **TV BOX™**,

**AnyBody™** conduit bodies and **QuickLatch™** pipe hangers, among many others, have made their mark on the electrical industry.

Today, Arlington makes more individual zinc die cast line items than anyone else, and is still the only independent electrical fittings manufacturer with injection molding capability for producing non-metallic fittings in-house, here in the United States.

**Arlington®**

**INNOVATION**

We remain firmly committed to new product development – a fact recognized by the many awards received from industry trade

publications for innovative products in designated categories.

Arlington has also won numerous awards over the years in the Manufacturer of the Year and Supplier of the Year categories.

Thank you to everyone; customers, representatives, employees and management who have contributed to our success over the past 75 years.

We look forward to the next 75!
