WIRE GRABBER™ Kits

*Hanging Support for Fixtures and More, up to 75 lbs**

Now it's easier than ever to get reliable hanging support for fixtures, fixture boxes, cable tray and other static loads requiring drop wire support!

Better than traditional wire-hanging methods, **Wire Grabber™ kits** save time and **cost much less than competitive products.**

Perfect for dry or wet locations, Wire Grabber connector's hold on braided wire is unaffected by oil or grease. It holds an angular load as well as any other static load, including high bay light fixtures.

The connector ships fully assembled and there's no internal spring. Finger tightening the thumb screw engages six points of contact for easy length adjustment without kinking or bending the wire.

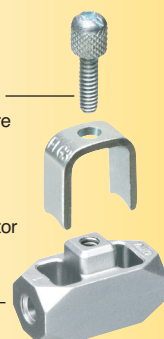

- Tighten screw with pliers or screwdriver to finish – no special tool required
- Available in **Straight or "Y" Kits** with 2mm (.080") braided wire in lengths from five to thirty feet, with loop, toggles or hooks

Secure grip on wire

Tightening screw engages six points of contact on wire

Easy to use

Push wire through connector and out the other side. Loop wire back through connector. Tighten screw.
