# Nail-on, Flanged Vapor Boxes for Devices

## Stop Air Infiltration in New Construction

©2017 Arlington Industries, Inc. 0417/REV0918 /25M

Designed for devices, Arlington's non-conductive, single and two-gang Vapor Boxes **nail** to studs in new construction.

Gaskets inside these easy-to-install boxes form a protective barrier **against air infiltration inside**. They help meet International Energy Conservation Codes (IECC) – and other codes *where required*.

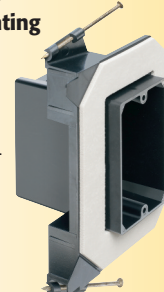

For extra convenience, nails ship captive and the installed NM cable connectors *and flange* already have the gasket material attached. There's *no assembly required!*

Plus, **built-in gasketed flanges have ultra-thin alignment tabs so there's NO BULGE in the DRYWALL.**

- Non-metallic boxes fit single 1/2" or 5/8" drywall
- cULus Listed, UV rated
- NEMA OS-4 Rated for Air Leakage
- 2-Hour Fire Rating
