**Adjustable SLIDERBAR delivers  
NEAT Vertical or Horizontal Mounting  
of Single gang Plastic and Metal Boxes  
on Metal or Wood Studs**

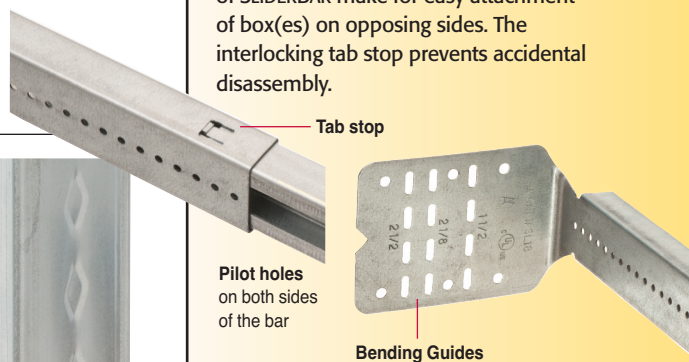

Metal boxes  
work on  
SLIDERBAR

Here's the easy, NEAT way to mount single or two-gang boxes between wood or metal studs with non-standard spacing.

Arlington's steel **SLIDERBAR®** looks great and **saves about 20 minutes per box** over cutting, nailing and placing extra 2x4s. **SL18** adjusts to fit between studs spaced 12 to 18 inches apart – **SL24** fits 15 to 24 inch spacing. Both allow you to position one or multiple boxes where you need them – including *in opposite directions*.

Pre-formed pilot holes on BOTH sides of SLIDERBAR make for easy attachment of box(es) on opposing sides. The interlocking tab stop prevents accidental disassembly.

- 'Bending' guides on bracket ends assure proper positioning on studs.
- SLIDERBAR and plastic boxes sold separately. SLIDERBAR Box Kits include single or two gang plastic boxes with preformed screw holes. Plastic boxes rated for NM Cable, NMB-PCS and NMD90 in Canada.
- When using a metal box SLIDERBAR is rated for non-metallic as well as MC, AC and FMC cable.

Patent pending

# SLIDERBAR® Boxes • SLIDERBAR/Box Kits

*Adjusts to Fit Non-standard Stud Spacing*

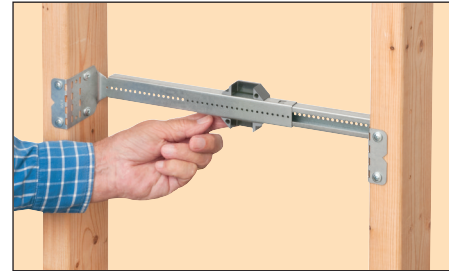

## EASY TO INSTALL

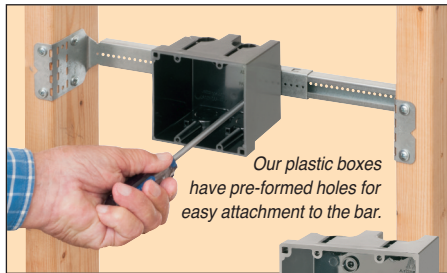

Bend bracket ends at 2-1/2" mark for use with 1/2" or 5/8" thick wall board. Ends can also be bent 90° or backwards at 180° as needed for inside mounting.

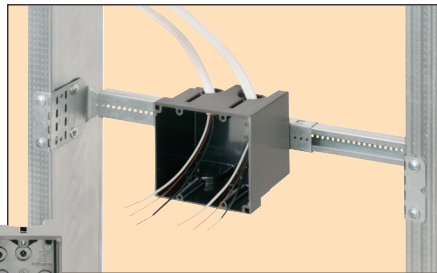

Determine placement of slider bar on stud. Fasten slider bar to metal or wood studs.

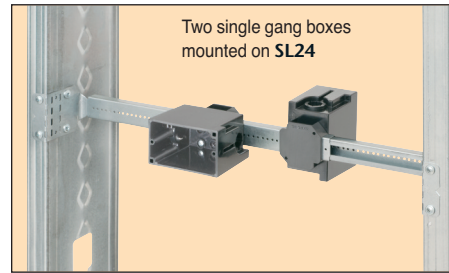

**OPTION**  
Use supplied slider clip(s) to mount box(es) on SLIDERBAR

Install **plastic or metal box(es)** on SLIDERBAR with #8 sheet metal screws or nails.

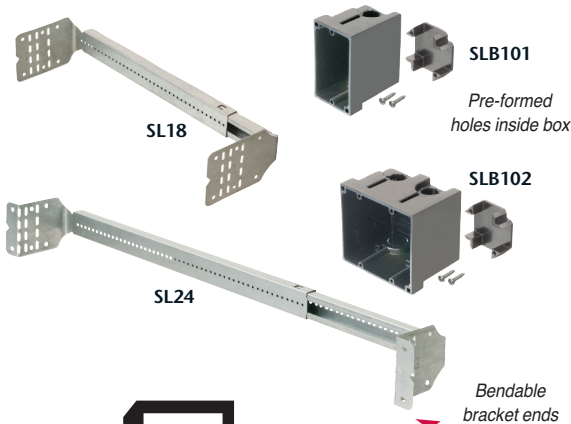

Pull wires.

Single gang box mounts vertical or horizontal. Pilot holes on both sides of the bar allow for installation of opposing boxes.

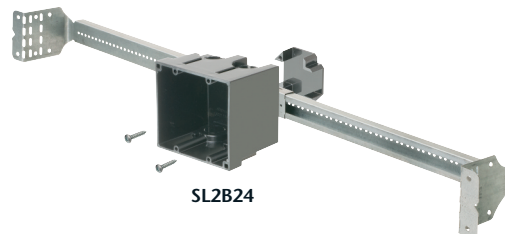

***SAVES ABOUT 20 MINUTES per Box!***
